Lesson Summary: This week students will learn about Earth and its structure, specifically the theory of continental drift and its relationship to plate tectonics. Students will also continue work in the area of Scientific Method and its 5 steps.

Materials Needed:

- **Unit 1.5 Earth Structure Video (Time: 2:24 min)** & Note-taking Guide **Unit 1.5 Handout 1**
- Reading on Pangaea (2 pages) **Unit 1.5 handout 2** (Spectrum Science, Gr. 6, pages 16-17)
- Reading on Scientific Method & Using Scientific Method (3 pages) **Unit 1.5 Handout 3** (6-way Paragraph, Introductory Level, pages 144 – 145)
- Homework **Unit 1.5 Handout 4** (6-way Paragraphs Introductory Level, pages 40 – 41)
- **Unit 1.5 Handout 5** Scientific Method Foldable Chart

Objectives: Students will be able to...

- Understand continental drift theory and its relationship to plate tectonics
- List the steps of the Scientific Method

College and Career Readiness Standards: RI, RST, WHST

ACES Skills Addressed: EC, DFP, LS, AL, CT, SM

Notes: Explain to students the importance of citing or finding evidence in reading passages to support theories and main ideas. The first activity is a video that lists evidence used in the theory of continental drift. The 2nd activity also cites evidence to support the theory. The 3rd activity has the students reading about the Scientific Method and searching for evidence. Remind students that searching for evidence from a reading passage is a skill needed on many modules or portions of the GED test as well as a college skill.

GED 2014 Science Test Overview – For Teachers and Students

The GED Science Test will be 90 minutes long and include approximately 34 questions with a total score value of 40. The questions will have focus on three content areas: life science (~40%), physical science (~40%), and Earth and space science (~20%). Students may be asked to read, analyze, understand, and extract information from a scientific reading, a news brief, a diagram, graph, table, or other material with scientific data and concepts or ideas.

The online test may consist of multiple choice, drop down menu, and fill-in-the-blank questions. There will also be a short answer portion (suggested 10 minutes) where students may have to summarize, find evidence (supporting details), and reason or make a conclusion from the information (data) presented.
The work students are doing in class will help them with the GED Science Test. They are also learning skills that will help in many other areas of their lives.

Activities:

**Warm-Up: KWL – Continental Drift (Pangaea)**  
**Time: 10 minutes**

- As students enter the class, have the following written on the board or overhead: “Continental Drift is the theory of one supercontinent (called Pangaea) that may have existed many millions of years ago. It then broke apart and drifted to form the continents that we know of today.”
- Have students create a “KWL” chart on a piece of notebook paper (below). This helps to activate students’ prior knowledge by asking them what they already Know (column 1); students (collaborating as a classroom unit or within small groups) set goals specifying what they Want to learn (column 2); and after reading students discuss what they have Learned (column 3). Students apply higher-order thinking strategies which help them construct meaning from what they read and help them monitor their progress toward their goals.

**KWL Chart:**

<table>
<thead>
<tr>
<th>K - What (else) do I KNOW?</th>
<th>W - What do I WANT to know?</th>
<th>L - What did I LEARN?</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Activity 1: Unit 1.5 Handout 1 and Video**  
**Time: 15 minutes**

1) Hand out (Unit 1.5 Handout 1) to students.  
2) Explain to students they will watch a video and take notes and answer questions from the video, the notes are for their own information and background knowledge on continental drift and plate tectonics  
3) ask students to write down questions they may have from the video  
4) After watching video, review answers to questions as a whole class.

**Activity 2: Reading for Comprehension (Unit 1.5 Handout 2)**  
**Time: 30 - 40 minutes**

1) Distribute Unit 1.4: Handout 2 to students.  
2) Discuss with students that when reading for comprehension, there are many strategies to use: read the title to predict what the reading is about; look at the words in bold and their definitions on the left side of page; if there are images, look at them to get a better understanding; while reading remember to ask “What is this all about?”  
3) Have students read the passage and answer the questions independently  
4) Circulate class while they are reading to make sure they understand the information presented and see if there are any questions  
5) Review answers as a whole class – note: some answers may vary – ask students with different answers to discuss theirs with the class.  
6) Have students fill in the “L” part of their KWL chart to reinforce what was learned from the video.  
7) If there is extra time, have students read passage in pairs to promote reading fluency.
### Activity 3: Scientific Method & Using the Scientific Method (Unit 1.5 Handout 3)  
**Time:** 50 minutes

1) Activate student’s prior knowledge from the last lesson and ask them what they remember about the Scientific Method – write their answers on board to review for those who may have been absent  
2) Hand out Unit 1.5: Handout 3 to students.  
3) Explain to class they do not have to be a scientist to take the GED Science test, but they do have to know some parts of the Scientific Method. There may be a few questions on the test where students will read about a science experiment and then will have to understand or point out certain steps or parts of the experiment. This reading may be similar to what they will have to do on a GED Science test.  
4) Have students read passages silently and answer questions. Circulate the room to make sure students are able to handle the material. Answer any questions they may have  
5) Review answers as a whole class and make sure students understand correct answers  
6) Teacher reads passage and students highlight new vocabulary  
7) Teacher reviews vocabulary  
8) Students read passage to each other in pairs if there is time  
   **Note:** Classroom routine 3: “6-way paragraphs” is used in this activity.  
9) If needed, make a copy of Unit 1.5 Handout 5 for students to study (foldable Scientific Method)

### Wrap-Up: Summarize  
**Time:** 5 minutes

Have students turn to a partner (or write in their journals) about what they have learned today about the Scientific Method. If the students seem to be a bit confused about it, ask them to write one question or wondering they have from the reading passage.  
   **Note:** Can use summarizing notes from classroom routines.

### Extra Work/Homework: Fossils  
(Unit 1.5 Handout 4)  
**Time:** 30 minutes outside of class

Students can read and answer questions from the 6-way Paragraphs (Introductory Level) reading #20 (p. 40 - 41) “Fossils”. This is an excellent opportunity for students to review material in a different format.

### Differentiated Instruction/ELL Accommodation Suggestions

If some students finish early, they can use the time to practice summarizing a multi-paragraph reading.  

There may be a lot of ideas with the Scientific Method. There is a handy foldable chart for studying Unit 1.5 Handout 5. You may want to make a copy for all.

Continental Drift Video

While watching the video, try to answer some of the following questions. There is also space for you to write your own questions on the subject.

1. According to the video, which two continental coastlines look like they match up?

2. According to the video, how many years ago were the continents joined together in a single super continent?

3. What is some additional evidence German Scientist Alfred Wegener offered for proof of continental drift?

4. According to the video, what evidence did other scientists provide years later to support theory of continental drift?

5. What questions or wonderings do you have about Pangaea or continental drift?

6. List the seven continents in alphabetical order:
   1.  
   2.  
   3. 
   4. 
   5. 
   6. 
   7.
Video Continental Drift Video – TEACHER ANSWER KEY

While watching the video, try to answer some of the following questions. There is also space for you to write your own questions on the subject.

1. According to the video, which two continental coastlines look like they match up? (Africa and South America)

2. According to the video, how many years ago were the continents joined together in a single super continent? (200 million)

3. What is some additional evidence German Scientist Alfred Wegener offered for proof of continental drift? (fossils of identical animals in both South America and Africa; plant fossils in cold arctic regions)

4. According to the video, what evidence did other scientists provide years later to support theory of continental drift? (Scientists mapped the ocean floor)

5. What questions or wonderings do you have about Pangaea or continental drift?

6. List the continents in alphabetical order:

   1. Africa
   2. Antarctica
   3. Asia
   4. Australia
   5. Europe
   6. North America
   7. South America

(Note: In some school systems around the world, students are taught there are 5 continents (no Antarctica and the Americas are one continent); however in the US, we go with 7.)
## Unit 1.5 Handout 3 (or copy – 6-way Paragraph, Introductory – pages 144 – 145)

### ANSWER KEY

1. **Main Idea**
   - a. B
   - b. N
   - c. M

2. C

3. A

4. B

5. D

6. A
Using the Scientific Method

1. Read the passage and fill in the Scientific Method chart.

   **How Penicillin Was Discovered**

   In 1928, Sir Alexander Fleming was studying Staphylococcus bacteria growing in culture dishes. He noticed that a mold called *Penicillium* was also growing in some of the dishes. A clear area existed around the mold because all the bacteria that had grown in this area had died. In the culture dishes without the mold, no clear areas were present.

   Fleming hypothesized that the mold must be producing a chemical that killed the bacteria. He decided to isolate this substance and test it to see if it would kill bacteria. Fleming transferred the mold to a nutrient broth solution. This solution contained all the materials the mold needed to grow. After the mold grew, he removed it from the nutrient broth. Fleming then added the nutrient broth in which the mold had grown to a culture of bacteria. He observed that the bacteria died.

   1. What was the **observation**?
   2. What was the **hypothesis**?
   3. How was the hypothesis **tested**?
   4. What was the **result** of the experiment?
   5. What **conclusion** could be drawn?

2. **Answer the GED-type question based on the Scientific Method.**

   In 1887 a strange nerve disease attacked the people in the Dutch East Indies. The disease was beriberi. Symptoms of the disease included weakness and loss of appetite; victims often died of heart failure. Scientists thought the disease might be caused by bacteria. They injected chickens with bacteria from the blood of patients with beriberi. The injected chickens became sick. However, so did a group of chickens that were not injected with bacteria.

   One of the scientists, Dr. Eijkman, noticed something. Before the experiment, all the chickens had eaten whole-grain rice, but during the experiment, the chickens were fed polished rice. Dr. Eijkman researched this interesting case. He found that polished rice lacked thiamine, a vitamin necessary for good health.

   Which of the following conclusions is based on the experiment described in the passage?

   (1) Humans can catch beriberi from diseased chickens.
   (2) Beriberi only occurs in the Dutch East Indies.
   (3) Scientists have not yet determined which bacteria cause beriberi.
   (4) Adequate intake of thiamine prevents beriberi disease.
   (5) Whole grain rice and polished rice have equivalent nutritional value.

---

**Unit 1.5 Handout 3**

**ANSWER KEY**

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. What as the <em>observation</em>?</td>
<td>Where there was <em>Penicillium</em> mold, there were also dead bacteria.</td>
</tr>
<tr>
<td>2. What was the <em>hypothesis</em>?</td>
<td>The mold must produce a chemical that kills the bacteria.</td>
</tr>
<tr>
<td>3. How was the hypothesis <em>tested</em>?</td>
<td>Grow more of the mold separately and then return it to the bacteria.</td>
</tr>
<tr>
<td>4. What was the <em>result</em> of the experiment?</td>
<td>When the material is returned to the mold, the bacteria died.</td>
</tr>
</tbody>
</table>

2. Choice (4) is correct because the doctor saw that when the chickens ate whole-grain rice with thiamine, they did not have the disease.

Choice (1) is incorrect because the chickens were used in the experiment; they had nothing to do with the disease.

There is nothing to support choice (2); the passage only mentions the conditions in the Dutch East Indies and the beriberi was widespread.

Choice (3) is incorrect because the passage points out that before the experiments, scientists incorrectly thought beriberi was caused by bacteria.

Choice (5) is incorrect because the doctor found that the polished rice lacked thiamine, so the two types of rice don’t have the same nutritional value.
### Scientific Method Foldable for Studying

**Fold paper on black line and quiz yourself**

**A step-by-step method for solving problems**
